

JOURNEY 2 TRIP 11
HOW TO MAKE A RAIN GAUGE

1. Cut the top section off a clear bottle as shown.

2. Use a ruler to mark measuring increments with 0 startng about 2" from the bottom.

3. Place several small rocks in the bottom (for weight), then fill the bottle with water to the 0 mark.

4. Create a funnel by inverting the top of the bottle into the rain gauge.

5. Place the gauge outside on a flat surface.

6. The next time it rains, check your rain gauge and record the date and amount of rain.

7. Empty the rain out of the gauge to start again.
